## **SOLOY'S HONEYWELL INSTALLATION CERTIFIED**

### **SOLOY receives certification for Honeywell engine installation in the AS350B2**

After an 18 month program SOLOY AVIATION SOLUTIONS has received a supplemental type certificate, covering the installation of the Honeywell LTS101-700D-2 in the Eurocopter AS350B2 helicopter. The operators of the popular AS350B2 can now share the advantages obtained by Soloy's "Super D" owners who currently enjoy significant fuel consumption reductions and major savings in engine operating costs. All obtained while maintaining the helicopters outstanding performance.

Soloy's "SD2" is powered by Honeywell's remarkably efficient LTS101-700D-2, a truly mature engine and the result of a long development and product improvement program completed by Honeywell, the current owner of the once Lycoming engine line. Honeywell, Soloy and current operators can very positively state that the "LTS101 is back" providing reliable power and increased profits.

Soloy, working with Aerospace Filtration Systems, will have an inlet barrier filter available soon, specifically designed for the re-engined helicopter. This along with the AKV cycle counter will ensure accurate cycle counts, enabling operators to achieve maximum parts life of the engine components.

Soloy's receipt of this STC marks 30 years since the company installed the then Allison 250-C20 in the Hiller UH-12E. Since then over 550 Rolls-Royce 250 series engines have been installed in helicopter airframes from the Bell 47 to the Bell Twin Ranger. This milestone represents the ninth (9th) helicopter engine installation certification for Soloy.
